

WHAT IS CLAIMED IS:

1. A portable terminal formed by connecting a main unit and a flip unit having a monitor screen by a rotatable axial unit, comprising:

- 5 a first photographic lens housed in the axial unit in the longitudinal direction; and
a second photographic lens provided at a predetermined position on the flip unit.

2. A portable terminal as set forth in Claim 1, in which

- the flip unit has said second photographic lens on the side of the monitor screen, and
5 the axial unit has a structure of closing both the units making inside surface of the main unit into contact with inside surface of the flip unit.

3. A portable terminal as set forth in Claim 2, further comprising:

- an axial unit state sensor for detecting angle or positional relationship of the flip unit and the main unit, according to the angle of a movable portion of the axial unit; and
5

a means for selecting and executing each function predetermined based on the angle or relationship of the flip unit and the main unit detected by said axial unit

10 state sensor, from various usable functions provided in
the portable terminal.

4. A portable terminal as set forth in Claim 3,
further comprising:

a microphone on the inside of the main unit;
a speaker on the inside of the flip unit;
5 a communication unit for sound communication; and
a means for putting a communication function
through a wireless communication line into an executable
state

when the inside surface of the main unit and the
10 inside surface of the flip unit are opened in the same
direction.

5. A portable terminal as set forth in Claim 3,
further comprising:

a microphone on one surface of the main unit;
a speaker on the outside of the flip unit;
5 a communication unit for sound communication; and
a means for putting a communication function
through a wireless communication line into an executable
state

when the surface having said microphone on the
10 main unit and the outside surface of the flip unit are
opened in the same direction.

6. A portable terminal as set forth in Claim 4,
further comprising:

a microphone on the inside of the main unit;
said communication unit

5 including a communication means of an image; and
a means for putting a communication function of a
TV telephone through a wireless communication line into
an executable state

10 when the surface having said microphone on the
main unit and the inside surface of the flip unit are
opened in the same direction.

7. A portable terminal as set forth in Claim 3,
further comprising:

an information processing unit for processing
input information and instruction;

5 the monitor screen that is a monitor with a touch
panel; and

a means for putting a function of an information
terminal for processing the input information and
instruction upon receipt of the input from the touch
10 panel, into an executable state

when the outside surface of the flip unit and one
surface of the main unit are closed in contact with each
other.

8. A portable terminal as set forth in Claim 4,

further comprising:

a storing means for storing electronic data;

5 a means for converting a static image taken by
said first photographic lens and said second
photographic lens into electronic data; and

a means for putting a photographic function as a
digital camera into an executable state

10 when the main unit and the flip unit are opened
so as to direct said first photographic lens and said
second photographic lens in an inverse direction.

9. A portable terminal as set forth in Claim 8,
further comprising:

5 a means for converting a moving image taken by
said first photographic lens and said second
photographic lens into electronic data; and

a means for putting a photographic function as a
digital video camera into an executable state

10 when the main unit and the flip unit are opened
so as to direct said first photographic lens and said
second photographic lens in an inverse direction.

10. A portable terminal as set forth in Claim 4,
further comprising:

5 a means for stopping a predetermined function to
be finished, of the functions under activation, after
judging that the function is in unused state

when the inside surface of the main unit and the inside surface of the flip unit are closed in contact with each other.

11. A portable terminal as set forth in Claim 1, further comprising:

a storing means for storing electronic data.

12. A portable terminal as set forth in Claim 11, further comprising:

a means for converting a static image taken by said first photographic lens and said second
5 photographic lens into electronic data,

the portable terminal storing the taken static image in said storing means as a digital camera.

13. A portable terminal as set forth in Claim 12, further comprising:

a means for converting a moving image taken by said first photographic lens and said second
5 photographic lens into electronic data,

the portable terminal storing the taken moving image in said storing means as a digital video camera.

14. A portable terminal as set forth in Claim 1, further comprising:

a communication unit for image and sound

communication; and

5 a means for transmitting images taken by said first photographic lens and said second photographic lens through said communication unit.

15. A portable terminal as set forth in Claim 14, in which

 the main unit is provided with said microphone, the flip unit is provided with said speaker, and
5 communication through a wireless communication line is performed by said communication unit.

16. A portable terminal as set forth in Claim 15, further comprising:

 a means for displaying the image received by said communication unit on the monitor screen, reproducing
5 the sound received by said communication unit through said speaker, and transmitting the images taken by said first photographic lens and said second photographic lens and the sound supplied to said microphone, to a communication party, in which

10 communication by a TV telephone is performed by said communication unit.

17. A portable terminal as set forth in Claim 1, further comprising:

 an information processing unit for processing

input information and instruction;

5 the monitor screen that is a monitor with a touch panel; and

 a means for receiving input from the touch panel and processing the input information and instruction.

18. A portable terminal as set forth in Claim 17, in which

 input with an input pen on the monitor screen that is the touch panel monitor is accepted.

5

19. A portable terminal as set forth in Claim 1, further comprising:

 an operation button for specifying the type of an image to be displayed on the monitor screen, to a control unit, in which

5

 the type of an image to be displayed on the monitor screen is switched according to the specification by said operation button.

20. A portable terminal as set forth in Claim 19, further comprising:

 a means for displaying an image taken by said first photographic lens on the monitor screen;

5

 a means for displaying an image taken by said second photographic lens on the monitor screen; and

 a means for displaying the image taken by said

10 first photographic lens and the image taken by said
second photographic lens simultaneously on the monitor
screen at predetermined respective portions, in which
the type of an image to be displayed on the
monitor screen is switched according to the
specification by said operation button.

21. A portable terminal as set forth in Claim 1,
further comprising:

5 an input/output unit for performing communication
by electric signals through connection to an outward
information device, in which
bidirectional data transfer is performed with the
outward information device through said input/output
unit.

22. A portable terminal as set forth in Claim 1,
further comprising:

a sound input/output terminal for sending and
receiving a sound signal.

5

23. A portable terminal as set forth in Claim 1, in
which

the axial unit

5 connects a central portion of one side of the
flip unit to a central portion of one side of the main
unit in a movable way, and

includes an opening/shutting axis for connecting both the flip unit and the main unit in a way of freely opening and closing around the connected one side, and
10 a rotation axis for connecting the flip unit in a way of freely rotating across around said opening/shutting axis.

24. A portable terminal formed by connecting a main unit and a flip unit having a monitor screen by a rotatable axial unit, comprising:
 a first photographic lens in the vicinity of the
5 axial unit; and
 a second photographic lens provided at a predetermined position on the flip unit.

25. A portable terminal as set forth in Claim 24, in which
 the flip unit has said second photographic lens on the side of the monitor screen, and
5 the axial unit has a structure of closing both the units making inside surface of the main unit into contact with inside surface of the flip unit.

26. A portable terminal as set forth in Claim 25, further comprising:
 an axial unit state sensor for detecting angle or positional relationship of the flip unit and the main

5 unit, according to the angle of a movable portion of the axial unit; and

a means for selecting and executing each function predetermined based on the angle or relationship of the flip unit and the main unit detected by said axial unit
10 state sensor, from various usable functions provided in the portable terminal.

27. A portable terminal as set forth in Claim 26, further comprising:

a microphone on the inside of the main unit;
a speaker on the inside of the flip unit;
5 a communication unit for sound communication; and
a means for putting a communication function through a wireless communication line into an executable state

when the inside surface of the main unit and the
10 inside surface of the flip unit are opened in the same direction.

28. A portable terminal as set forth in Claim 26, further comprising:

a microphone on one surface of the main unit;
a speaker on the outside of the flip unit;
5 a communication unit for sound communication; and
a means for putting a communication function through a wireless communication line into an executable

state

10 when the surface having said microphone on the
main unit and the outside surface of the flip unit are
opened in the same direction.

29. A portable terminal as set forth in Claim 27,
further comprising:

5 a microphone on the inside of the main unit;
 said communication unit including a communication
means of an image; and

 a means for putting a communication function of a
TV telephone through a wireless communication line into
an executable state

10 when the surface having said microphone on the
main unit and the inside surface of the flip unit are
opened in the same direction.

30. A portable terminal as set forth in Claim 26,
further comprising:

5 an information processing unit for processing
input information and instruction;
 the monitor screen that is a monitor with a touch
panel; and

 a means for putting a function of an information
terminal for processing the input information and
instruction upon receipt of the input from the touch
10 panel, into an executable state

when the outside surface of the flip unit and one surface of the main unit are closed in contact with each other.

31. A portable terminal as set forth in Claim 27, further comprising:

a storing means for storing electronic data;

a means for converting a static image taken by

5 said first photographic lens and said second

photographic lens into electronic data; and

a means for putting a photographic function as a digital camera into an executable state

10 when the main unit and the flip unit are opened so as to direct said first photographic lens and said second photographic lens in an inverse direction.

32. A portable terminal as set forth in Claim 31, further comprising:

a means for converting a moving image taken by said first photographic lens and said second

5 photographic lens into electronic data; and

a means for putting a photographic function as a digital video camera into an executable state

10 when the main unit and the flip unit are opened so as to direct said first photographic lens and said second photographic lens in an inverse direction.

33. A portable terminal as set forth in Claim 27,
further comprising:

a means for stopping a predetermined function to
be finished, of the functions under activation, after
5 judging that the function is in unused state

when the inside surface of the main unit and the
inside surface of the flip unit are closed in contact
with each other.

34. A portable terminal as set forth in Claim 24,
further comprising:

a storing means for storing electronic data.

35. A portable terminal as set forth in Claim 34,
further comprising:

a means for converting a static image taken by
said first photographic lens and said second
5 photographic lens into electronic data,

the portable terminal storing the taken static
image in said storing means as a digital video camera.

36. A portable terminal as set forth in Claim 35,
further comprising:

a means for converting a moving image taken by
said first photographic lens and said second
5 photographic lens into electronic data,

the portable terminal storing the taken moving

image in said storing means as a digital video camera.

37. A portable terminal as set forth in Claim 24, further comprising:

a communication unit for image and sound communication; and

5 a means for transmitting images taken by said first photographic lens and said second photographic lens through said communication unit.

38. A portable terminal as set forth in Claim 37, in which

the main unit is provided with said microphone, the flip unit is provided with said speaker, and communication through a wireless communication

5 line is performed by said communication unit.

39. A portable terminal as set forth in Claim 38, further comprising:

a means for displaying the image received by said communication unit on the monitor screen, reproducing the sound received by said communication unit through said speaker, and transmitting the image taken by said first photographic lens and said second photographic lens and the sound supplied to said microphone, to a communication party, in which

10 communication by a TV telephone is performed by

said communication unit.

40. A portable terminal as set forth in Claim 24,
further comprising:

an information processing unit for processing
input information and instruction;

5 the monitor screen that is a monitor with a touch
panel; and

a means for receiving input from the touch panel
and processing the input information and instruction.

41. A portable terminal as set forth in Claim 40, in
which

input with an input pen on the monitor screen
that is the touch panel monitor is accepted.

5

42. A portable terminal as set forth in Claim 24,
further comprising:

an operation button for specifying the type of an
image to be displayed on the monitor screen, to a
5 control unit, in which

the type of an image to be displayed on the
monitor screen is switched according to the
specification by said operation button.

43. A portable terminal as set forth in Claim 42,
further comprising:

a means for displaying an image taken by said first photographic lens on the monitor screen;

5 a means for displaying an image taken by said second photographic lens on the monitor screen; and

a means for displaying the image taken by said first photographic lens and the image taken by said second photographic lens simultaneously on the monitor
10 screen at predetermined respective portions, in which the type of an image to be displayed on the monitor screen is switched according to the specification by said operation button.

44. A portable terminal as set forth in Claim 24, further comprising:

an input/output unit for performing communication by electric signals through connection to an outward
5 information device, in which

bidirectional data transfer is performed with the outward information device through said input/output unit.

45. A portable terminal as set forth in Claim 24, further comprising:

a sound input/output terminal for sending and receiving a sound signal.

5

46. A portable terminal as set forth in Claim 24, in

which

the axial unit connects a central portion of one side of the flip unit to a central portion of one side

5 of the main unit in a movable way, and

includes an opening/shutting axis for connecting both the flip unit and the main unit in a way of freely opening and closing around the connected one side, and

10 a rotation axis for connecting the flip unit in a way of freely rotating across around said opening/shutting axis.
